

Sensitive, Specific Imaging

Breast-Specific Gamma Imaging with the Dilon 6800 Gamma Camera

Breast-Specific Gamma Imaging (BSGI) with the Dilon 6800 Gamma Camera is your "next step" after a questionable or indeterminate mammogram. **Sensitive** enough to detect DCIS, lobular carcinoma and small non-palpable lesions. **Specific** enough to help differentiate between malignant and benign tissue.

Sensitive, specific imaging of BSGI with the Dilon 6800

- High sensitivity for sub-centimeter lesions
- High positive and negative predictive values
- Allows correlation to all mammographic views
- Improves management of difficult-to-diagnose patients
